

PREMIER CLOCHES

Keep those greedy pests at bay with a Premier Cloche!

A garden cloche is an economical, portable or removable 'mini polytunnel' that sits on a veg patch or flower bed, as and when you need it - the perfect plant protector for customers growing in a limited space, such as patios, yards and raised beds.

Cloches are ideal for protecting your plants from weather and pests, and can be covered in polythene, anti bird net or windbreak/shade net.

Our cloche hoops are made using 28mm diameter Z35 high tensile galvanised steel, which will last for years. Timber base rails are pressure treated with a wood preserver to protect against rot and the cover is fixed simply by using timber battens and nails.

Cloche Specification:

- Width: 4ft
- Height: 3ft 7in
- Distance Over Hoop: 9ft 6in
- Steel Diameter: 28mm
- Steel Specification: Z35 high tensile galvanised

INDIVIDUAL CLOCHE HOOPS

Simply press the cloche hoops into your veg patch or flower bed and cover with polythene during those early growing months to protect your plants from late frost and insects. Change to a net cover later in the year and maintain the same protection from both airborne and ground-dwelling pests, while allowing your plants to reap the benefits of the outdoors.

Chicken Run! Why not protect your poultry from airborne predators by covering our individual cloche hoops with anti bird net, leaving the ends open for your chickens to take shelter inside?

Our cloche hoops are 4ft wide and 3ft 7in high (before pressing into soil), making them ideal for using on raised beds. Distance over the hoop is 9ft 6in (before pressing into soil).

POLYTHENE CLOCHE

A polythene cloche is a mini polytunnel which is used to retain heat and protect your plants from rain and late frost.

Premier Polytunnels Tip! A polythene cloche is ideal for 'double glazing' your polytunnel. Using a polythene cloche inside your polytunnel during the colder months gives your plants extra protection from the cold British winters, keeping the frost off your crops and saving on heating costs.

The polythene used for our polythene cloches is a clear, 480 gauge/120 micron polythene film - four times thicker and stronger than a cloche or dust film - with a 2-year warranty against UV degradation.

SHADE NET CLOCHE

This shade net cloche, which is covered in strong, robust windbreak/shade netting, is used to protect vulnerable plants and shrubs from extreme weather conditions, such as strong sunlight, winds and rain. The green netting used by Premier Polytunnels provides 40% shade and 50% wind reduction.

ANTI BIRD NET CLOCHE

Don't let the fruits of your labour be devoured by pests - protect them with an anti bird net cloche. This cloche offers crop protection from both airborne and ground-dwelling pests, ensuring that the only person likely to eat your crops is you.

Our anti bird net is a very strong, knitted net (rather than the cheap, polypropylene net offered by many other companies) which has mesh holes of 20mm - this is the optimum size to prevent small invaders getting in and feasting on your berries, but it also prevents small birds from becoming tangled in the net. This net cover also keeps shading to a minimum, allowing your crops to reap the benefits of the outdoors.
